# Optocoupler, Phototransistor Output, (Dual, Quad Channel), 110 °C Rated

Dual Channel

Quad Channel

i179015-1

DESCRIPTION

The ILD1615, ILQ1615 are multi-channel 110 °C rated phototransistor optocouplers that use GaAs IRLED emitters and high gain NPN phototransistors. These devices are constructed using over/under leadframe optical coupling and double molded insulation technology resulting a withstand test voltage of 7500 $V_{AC\ PEAK}$ and a working voltage of 1700 V_{RMS}.

The binned min. / max. and linear CTR characteristics make these devices well suited for DC or AC voltage detection. Eliminating the phototransistor base connection provides added electrical noise immunity from the transients found in many industrial control environments.

Because of guaranteed maximum non-saturated and saturated switching characteristics, the ILD1615, ILQ1615 can be used in medium speed data I/O and control systems. The binned min. / max. CTR specification allow easy worst case interface calculations for both level detection and switching applications. Interfacing with a CMOS logic is enhanced by the guaranteed CTR at I_F = 1.0 mA.

FEATURES

- Operating temperature from -55 °C to +110 °C
- Identical channel to channel footprint
- Dual and quad packages feature:
  - Reduced board space
  - Lower pin and parts count
  - Better channel to channel CTR match
  - Improved common mode rejection
- Isolation test voltage, 5300 V_{RMS}
- Material categorization: for definitions of compliance please see www.vishay.com/doc?99912
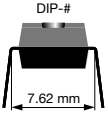

Pb Pb-free

e3

RoHS COMPLIANT

AGENCY APPROVALS

- UL 1577
- cUL
- DIN EN 60747-5-5 (VDE 0884), available with option 1
- FIMKO

Notes
- Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operational sections of this document. Exposure to absolute maximum ratings for extended periods of the time can adversely affect reliability.
