# **IR Receiver Modules for Remote Control Systems**

### LINKS TO ADDITIONAL RESOURCES

### DESCRIPTION

This IR receiver series is optimized for long burst remote control systems in different environments. The customer can chose between different IC settings (AGC variants), to find the optimum solution for his application. The higher the AGC, the better noise is suppressed, but the lower the code compatibility.

The devices contain a PIN diode and a preamplifier assembled on a lead frame. The epoxy package contains an IR filter. The demodulated output signal can be directly connected to a microprocessor for decoding. These components have not been qualified to automotive specifications.

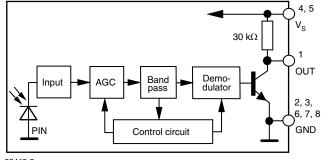

#### **FEATURES**

- Individual IC settings to reach maximum performance
- · Immunity against noise (lamps, LCD TV, Wi-Fi)
- Low supply current
- RoHS · Photo detector and preamplifier in one package COMPLIANT
- Supply voltage: 2.0 V to 5.5 V
- FREE · Material categorization: GREEN for definitions of compliance please see www.vishay.com/doc?99912

#### **DESIGN SUPPORT TOOLS**

- 3D models
- Window size calculator

#### **ORDERING CODE**

Taping: TSOP37...TT1 - top view taped, 1800 pcs/reel

#### **APPLICATION CIRCUIT**

 ${\rm R_1}$  and  ${\rm C_1}$  recommended in case there are strong ripple or spikes on the supply line.

PARTS TABLE				
AGC		LEGACY, FOR LONG BURST REMOTE CONTROLS (AGC2)	RECOMMENDED FOR LONG BURST CODES (AGC4)	
	36 kHz	TSOP37236	TSOP37436 <sup>(1)(2)(3)</sup>	
Carrier frequency	38 kHz	TSOP37238	TSOP37438 <sup>(4)(5)(6)</sup>	
	40 kHz	TSOP37240	TSOP37440	
	56 kHz	TSOP37256	TSOP37456 <sup>(7)</sup>	
Package		Belobog		
Pinning		1 = OUT, 2, 3, 6, 7, 8 = GND, 4, 5 = V <sub>S</sub>		
Dimensions (mm)		3.95 W x 3.95 H x 0.8 D		
Mounting		SMD		
Application		Remote control		
Best choice for		<sup>(1)</sup> RC-5 <sup>(2)</sup> RC-6 <sup>(3)</sup> Panasonic <sup>(4)</sup> NEC <sup>(5)</sup> Sharp <sup>(6)</sup> Mitsubishi <sup>(7)</sup> Thomson RCA		
Special options		Extended temperature range: <u>www.vishay.com/doc?82738</u>		

ABSOLUTE MAXIMUM RATINGS				
PARAMETER	TEST CONDITION	SYMBOL	VALUE	UNIT
Supply voltage		VS	-0.3 to +6	V
Supply current		I <sub>S</sub>	3	mA
Output voltage		Vo	-0.3 to (V <sub>S</sub> + 0.3)	V
Output current		Ιο	5	mA
Junction temperature		Tj	100	°C
Storage temperature range		T <sub>stg</sub>	-25 to +85	°C
Operating temperature range		T <sub>amb</sub>	-25 to +85	°C
Power consumption	$T_{amb} \le 85 \ ^{\circ}C$	P <sub>tot</sub>	10	mW

Note

• Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect the device reliability.

### **Vishay Semiconductors**

### SUITABLE DATA FORMAT

The TSOP372.., TSOP374.. series is designed to suppress spurious output pulses due to noise or disturbance signals. The devices can distinguish data signals from noise due to differences in frequency, burst length, and envelope duty cycle. The data signal should be close to the device's band-pass center frequency (e.g. 38 kHz) and fulfill the conditions in the table below.

When a data signal is applied to the TSOP372.., TSOP374.. in the presence of a disturbance, the sensitivity of the receiver is automatically reduced by the AGC to insure that no spurious pulses are present at the receiver's output. Some examples which are suppressed are:

- DC light (e.g. from tungsten bulbs sunlight)
- · Continuous signals at any frequency
- Strongly or weakly modulated patterns from fluorescent lamps with electronic ballasts (see Fig. 13 or Fig. 14)

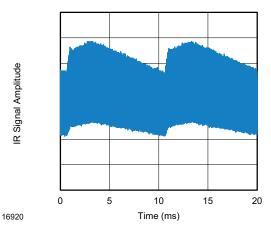

Fig. 13 - IR Signal from Fluorescent Lamp With Low Modulation

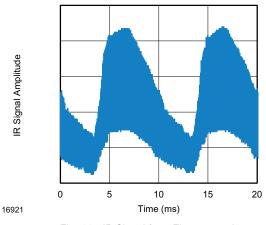

Fig. 14 - IR Signal from Fluorescent Lamp With High Modulation

	TSOP372	TSOP374
Minimum burst length	10 cycles/burst	10 cycles/burst
After each burst of length a minimum gap time is required of	10 to 70 cycles ≥ 12 cycles	10 to 35 cycles ≥ 12 cycles
For bursts greater than a minimum gap time in the data stream is needed of	70 cycles > 5 x burst length	35 cycles > 15 x burst length
Maximum number of continuous short bursts/second	1700	1700
NEC code	Yes	Preferred
RC5 / RC6 code	Yes	Preferred
Thomson RCA 56kHz code	Yes	Preferred
Sharp code	Yes	Preferred
Sony code	Yes	No
Mitsubishi code	Yes	Preferred
Suppression of interference from fluorescent lamps	Fig. 13	Fig. 13 and Fig. 14

#### Notes

• For data formats with short bursts (less than 10 carrier cycles) please see the datasheet for TSOP373.., TSOP375...

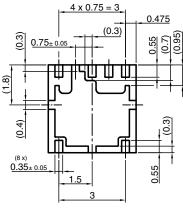

• For Sony 12, 15, and 20 bit IR codes please see the datasheet of TSOP37S40

#### **ASSEMBLY INSTRUCTIONS**

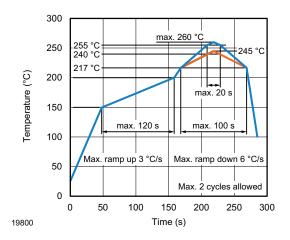

#### **Reflow Soldering**

- Reflow soldering must be done within 168 h while stored under a max. temperature of 30 °C, 60 % RH after opening the dry pack envelope
- Set the furnace temperatures for pre-heating and heating in accordance with the reflow temperature profile as shown in the diagram. Exercise extreme care to keep the maximum temperature below 260 °C. The temperature shown in the profile means the temperature at the device surface. Since there is a temperature difference between the component and the circuit board, it should be verified that the temperature of the device is accurately being measured
- Handling after reflow should be done only after the work surface has been cooled off

#### Manual Soldering

- Use a soldering iron of 25 W or less. Adjust the temperature of the soldering iron below 300 °C
- Finish soldering within 3 s
- Handle products only after the temperature has cooled off

#### **OUTER PACKAGING**

The sealed reel is packed into a pizza box.

#### LABEL

#### Standard bar code labels for finished goods

The standard bar code labels are product labels and used for identification of goods. The finished goods are packed in final packing area. The standard packing units are labeled with standard bar code labels before transported as finished goods to warehouses. The labels are on each packing unit and contain Vishay Semiconductor GmbH specific data.

BAR CODE PRODUCT LABEL (example)

### **Vishay Semiconductors**

(N) H/F

#### **DRY PACKING**

The reel is packed in an anti-humidity bag to protect the devices from absorbing moisture during transportation and storage.

### **FINAL PACKING**

The sealed reel is packed into a cardboard box.

#### **RECOMMENDED METHOD OF STORAGE**

Dry box storage is recommended as soon as the aluminum bag has been opened to prevent moisture absorption. The following conditions should be observed, if dry boxes are not available:

- Storage temperature 10 °C to 30 °C
- Storage humidity ≤ 60 % RH max.

After more than 168 h under these conditions moisture content will be too high for reflow soldering.

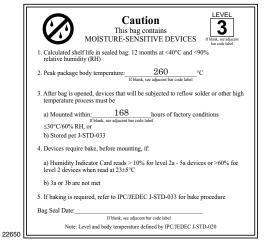

In case of moisture absorption, the devices will recover to the former condition by drying under the following condition:

192 h at 40  $^{\circ}C$  + 5  $^{\circ}C$  / - 0  $^{\circ}C$  and < 5 % RH (dry air / nitrogen) or

96 h at 60 °C + 5 °C and < 5 % RH for all device containers or

24 h at 125 °C + 5 °C not suitable for reel or tubes.

An EIA JEDEC<sup>®</sup> standard J-STD-020 level 3 label is included on all dry bags.

EIA JEDEC standard J-STD-020 level 3 label is included on all dry bags
