Power Resistor for Mounting onto a Heatsink
Thick Film Technology

**FEATURES**
- Compliant with requirement #26 of NF-EN45545-2
- High power rating: 250 W
- High overload capability up to 4 times nominal power (see energy curve)
- Easy mounting
- Low thermal radiation of the case

Developed for specific applications such as railroad electrical traction, this series can bear short overloads as high as fifteen times the nominal power. Designed to be mounted onto a heatsink, these power resistors exhibit remarkable characteristics.

**MECHANICAL SPECIFICATIONS**

- Mechanical Protection: Insulated case and resin for potting UL 94 V-0
- Resistive Element: Cermet
- Substrate: Alumina onto aluminum base
- End Connections: Screws M4 (M5 on request)
- Tightening Torque Connections: 2 Nm
- Weight: 170 g ± 10 %

**ENVIRONMENTAL SPECIFICATIONS**

- Thermal Resistance: $R_{th,j-c} = 0.22 \, ^\circ C/W$
- Temperature Range: -55 °C to 125 °C
- Climatic Category: 55 / 125 / 56

**TECHNICAL SPECIFICATIONS**

- Power Rating Chassis Mounted: 250 W at 50 °C continuous
  1000 W at 25 °C for 10 s
- Temperature Coefficient Standard: ± 250 ppm/°C < 1 Ω
  ± 150 ppm/°C > 1 Ω
- Dielectric Strength: MIL STD 202 (301),
  min, 10 mA max.
  L connections 7 kV_{RMS}
  H connections 12 kV_{RMS}
- Insulation Resistance: > 10^6 MΩ
- Inductance: < 50 nH
- Capacitance Resistor/ Ground: < 40 pF
  < 120 pF

Revision: 05-Jun-2019

Recommendations for mounting onto a heatsink

- Surfaces in contact must be carefully cleaned.
- The heatsink must have an acceptable flatness: From 0.05 mm to 0.1 mm / 100 mm.
- Roughness of the heatsink must be around 6.3 μm. In order to improve thermal conductivity, surfaces in contact (alumina, heatsink) should be coated with a silicone grease (type SI 340 from Rhône-Poulenc or Dow 340 from Dow Corning).
- The fastening of the resistor to the heatsink is under pressure control of four screws (not supplied).

Choice of the heatsink

The user must choose the heatsink according to the working conditions of the component (power, room temperature). Maximum working temperature must not exceed 125 °C. The dissipated power is simply calculated by the following ratio:

\[
P = \frac{\Delta T}{R_{th\ (j - c)} + R_{th\ (c - h)} + R_{th\ (h - a)}}
\]

- \( P \): Expressed in W
- \( \Delta T \): Difference between maximum working temperature and room temperature
- \( R_{th\ (j - c)} \): Thermal resistance value measured between resistive layer and outer side of the resistor. It is the thermal resistance of the component: (see Environmental Specifications).
- \( R_{th\ (c - h)} \): Thermal resistance value measured between outer side of the resistor and upper side of the heatsink. This is the thermal resistance of the interface (grease, thermal pad), and the quality of the fastening device.
- \( R_{th\ (h - a)} \): Thermal resistance of the heatsink.

Example:

For RPS 250 power dissipation 180 W at +50 °C room temperature.

- \( \Delta T \leq 125 °C - 50 °C \leq 75 °C \)
- \( R_{th\ (j - c)} + R_{th\ (c - h)} + R_{th\ (h - a)} = \frac{\Delta T}{P} = \frac{75}{180} = 0.42 °C/W \)
- \( R_{th\ (j - c)} = 0.22 °C/W \)
- \( R_{th\ (c - h)} + R_{th\ (h - a)} \leq 0.42 °C/W - 0.22 °C/W \leq 0.20 °C/W \)
OVERLOADS

In any case the applied voltage must be lower than 2.5 \( U_n \), \( U_{\text{max}} < 2.5 \ U_n < 12 \ 500 \text{ V}. \)

Short time overload: 4 Pr/10 s

Accidental overload: The values indicated on the graph below are applicable to resistors in air or mounted onto a heatsink.

ENERGY CURVE

![Energy Curve Graph]

POWER CURVE

![Power Curve Graph]

POWER RATING

The temperature of the heatsink should be maintained in the limit specified.

To improve the thermal conductivity, surfaces in contact should be coated with a silicone grease.
