

Thin Film, Center-Tapped Resistor Divider Network

Product may not be to scale

The CTA series resistor chips combine the best tolerances, stability and low shunt capacitance. The CTA offers the designer flexibility in use as either a single value resistor or as two resistors with a center tap feature. The CTAs six bonding pads allows the user increased layout flexibility. The CTAs are manufactured using Vishay Electro-Films (EFI) sophisticated thin film equipment and manufacturing technology. The CTAs are 100 % electrically tested and visually inspected to MIL-STD-883, method 2032 class H or K.

FEATURES

- Wire bondable
- Center tap feature
- Tight ratio tolerances to: $\pm 0.1\%$
- Chip size: 0.030" x 0.030"
- Case: 0303
- Resistance range total: 25 Ω to 35 k Ω
- Alumina substrate, low shunt capacitance: < 0.2 pF
- Resistor material nichrome
- Excellent stability: $\pm 0.025\%$ maximum $\Delta R/R$

APPLICATIONS

The CTA center-tapped resistor chips are used mainly in feedback circuits of amplifiers where ratio matching, low shunt capacitance and tracking between two resistors is critical.

Recommended for hermetic environments where chip is not exposed to moisture.

For lower values, the resistance of the six bonding-pad configurations can vary, depending on the method of measurement used. Vishay EFI measures low-value resistors by the four-wire Kelvin technique. The measuring method is illustrated in the diagram to the right.
