## Window Size Calculator for TCRT5000 and TCRT5000L

## INTRODUCTION

This calculation is used to dimension an appropriately sized window for the TCRT5000 depending on its distance to the sensor. The angles at half intensity / half sensitivity of emitter and detector are considered. A window should be at least large enough so that a signal path over these half intensity / half sensitivity angles is not blocked by an aperture. Blocking the emitted signal can result in increased offsets or decreased sensitivity.

## WINDOW CALCULATOR IN X-DIRECTION

## Parameters and Formula

$\mathrm{h}_{\mathrm{x} 1}=4.7 \mathrm{~mm} / \tan \left(29.5^{\circ}\right)=8.3 \mathrm{~mm}$
$\mathrm{h}_{\mathrm{x} 2}=4.7 \mathrm{~mm} / \tan \left(43.5^{\circ}\right)=5.0 \mathrm{~mm}$
$\mathrm{d}_{\mathrm{x} 1}=\tan \left(29.5^{\circ}\right) \times(\mathrm{a}-8.3 \mathrm{~mm})$
$\mathrm{d}_{\mathrm{x} 2}=\tan \left(43.5^{\circ}\right) \times(\mathrm{a}-5.0 \mathrm{~mm})$
$d_{\text {min. }}=6.7 \mathrm{~mm}$

If the distance a to the window is smaller than 5.0 mm , then:
$\mathrm{d}=\mathrm{d}_{\text {min. }}=6.7 \mathrm{~mm}$

If the distance a to the window is greater than 5.0 mm but smaller than 8.3 mm , then:
$d=d_{\text {min. }}+d_{x 2}=6.7 \mathrm{~mm}+\tan \left(43.5^{\circ}\right) \times(a-5 m m)$

If the distance a to the window is greater than 8.3 mm , then: $d=d_{\text {min. }}+d_{x 1}+d_{x 2}=6.7 \mathrm{~mm}+\tan \left(29.5^{\circ}\right) x(a-8.3 \mathrm{~mm})+$ $\tan \left(43.5^{\circ}\right) \times(\mathrm{a}-5 \mathrm{~mm})$

## Example Calculations

$$
\begin{aligned}
& a=0 \mathrm{~mm} \rightarrow d=d_{\text {min. }}=6.7 \mathrm{~mm} \\
& a=1 \mathrm{~mm} \rightarrow d=d_{\text {min. }}=6.7 \mathrm{~mm} \\
& \ldots \\
& a=5 \mathrm{~mm} \rightarrow d=d_{\text {min. }}=6.7 \mathrm{~mm} \\
& a=6 \mathrm{~mm} \rightarrow d=d_{\text {min. }}+d_{\times 2}=6.7 \mathrm{~mm}+\tan \left(43.5^{\circ}\right) \times(6 \mathrm{~mm}- \\
& 5 \mathrm{~mm})=7.6 \mathrm{~mm} \\
& a=7 \mathrm{~mm} \rightarrow d=d_{\text {min. }}+d_{\times 2}=6.7 \mathrm{~mm}+\tan \left(43.5^{\circ}\right) \times(7 \mathrm{~mm}- \\
& 5 \mathrm{~mm})=8.6 \mathrm{~mm} \\
& \ldots \\
& a=9 \mathrm{~mm} \rightarrow d=d_{\text {min. }}+d_{\times 1}+d_{\times 2}=6.7 \mathrm{~mm}+\tan \left(29.5^{\circ}\right) \times(9 \\
& \mathrm{mm}-8.3 \mathrm{~mm})+\tan \left(43.5^{\circ}\right) \times(9 \mathrm{~mm}-5 \mathrm{~mm})= \\
& d=6.7 \mathrm{~mm}+0.4 \mathrm{~mm}+3.8 \mathrm{~mm}=10.9 \mathrm{~mm} \\
& a=10 \mathrm{~mm} \rightarrow d=d_{\text {min. }}+d_{\times 1}+d_{\times 2}=6.7 \mathrm{~mm}+\tan \left(29.5^{\circ}\right) \times(10 \\
& \mathrm{mm}-8.3 \mathrm{~mm})+\tan \left(43.5^{\circ}\right) \times(10 \mathrm{~mm}-5 \mathrm{~mm})= \\
& d=6.7 \mathrm{~mm}+1.0 \mathrm{~mm}+4.7 \mathrm{~mm}=12.4 \mathrm{~mm}
\end{aligned}
$$

## WINDOW CALCULATOR IN Y-DIRECTION

## Parameters and Formula

$\mathrm{d}_{\mathrm{y}}=\tan \left(30^{\circ}\right) \mathrm{x} \mathrm{a}$
$\mathrm{h}_{\mathrm{x}}=1.55 \mathrm{~mm} / \tan \left(30^{\circ}\right)=2.7 \mathrm{~mm}$

If the distance a to the window is smaller than 2.7 mm , then: $\mathrm{d}=\mathrm{d}_{\text {min. }}=3.1 \mathrm{~mm}$

If the distance a to the window is greater than 2.7 mm , then: $d=2 \times d_{y}=2 \times \tan \left(30^{\circ}\right) \times a$

## Example Calculations

$$
\begin{aligned}
& \mathrm{a}=\mathbf{0} \mathrm{mm} \rightarrow \mathrm{~d}=\mathrm{d} \min =3.1 \mathrm{~mm} \\
& \mathrm{a}=1 \mathrm{~mm} \rightarrow \mathrm{~d}=\mathrm{d} \min =3.1 \mathrm{~mm} \\
& \mathrm{a}=\mathbf{2 \mathrm { mm }} \rightarrow \mathrm{d}=\mathrm{d} \min =3.1 \mathrm{~mm} \\
& \mathrm{a}=3 \mathrm{~mm} \rightarrow \mathrm{~d}=2 \times \tan \left(30^{\circ}\right) \times 3 \mathrm{~mm} \\
& \mathrm{~d}=1.16 \times 3 \mathrm{~mm}=3.5 \mathrm{~mm} \\
& \mathrm{a}=4 \mathrm{~mm} \rightarrow \mathrm{~d}=1.16 \times 4 \mathrm{~mm}=4.6 \mathrm{~mm} \\
& a=5 \mathrm{~mm} \rightarrow \mathrm{~d}=1.16 \times 5 \mathrm{~mm}=5.8 \mathrm{~mm} \\
& a=10 \mathrm{~mm} \rightarrow \mathrm{~d}=1.16 \times 10 \mathrm{~mm}=11.6 \mathrm{~mm}
\end{aligned}
$$
