

Taping of Diodes

AXIAL LEAD COMPONENTS

Diodes and rectifiers with axial leads are normally delivered in taped form according to IEC 286-1 (see Fig. 1). The cathode side is designated by a colored tape. Taped devices are normally delivered in ammo boxes (ammo pack). Delivery on reels is available on request.

Quantities per box dimensions 264 (L) x 146 (H) x 73 (W).

TAPE AND REEL SURFACE-MOUNTED DEVICES (SMDs)

SMDs are normally delivered taped on blister tape and reeled according to IEC 60286-3. The mounting side of the component is oriented to the bottom side of the tape. For components with two terminations, the cathode side is oriented to the sprocket hole. For components in SOT-23 package, the side from which one single termination emerges is oriented to the sprocket hole. Components can be delivered either on 180 mm or on 330 mm reels. For quantities per reel, see below.

MISSING DEVICES

A maximum of 0.5 % of the total number of components per reel may be missing - exclusively at the beginning and at the end of the reel. A maximum of three consecutive components may be missing, provided this gap is followed by six consecutive components (see figure 7).
