

# High Surge Axial Cemented Leaded Wirewound Resistors

## LINKS TO ADDITIONAL RESOURCES

The Z300-Cxx series, is the perfect choice for high voltage impulse applications. This product series is tested and proven to meet the 1.2 / 50  $\mu$ s pulse up to 12 kV defined in IEC 61000-4-5. Typical applications include but are not limited to energy meters, power supplies, etc.

## FEATURES

- Flameproof: non-flammable silicone cement coating conforming to UL 94 V-0
- High impulse voltage withstanding capability up to 12 kV according to IEC 61000-4-5 (1.2 / 50  $\mu$ s pulse shape)
- High grade ceramic core
- WSZ-form lead bending available for SMD mounting
- Material categorization: for definitions of compliance please see [www.vishay.com/doc?99912](http://www.vishay.com/doc?99912)

Z306M-Cxx							

**DESCRIPTION**

Wirewound resistors are best suited for use in high power, high current applications. The silicone cement lacquer coating enables Z300-Cxx to withstand challenging high voltage impulse conditions.

The coating is resistant to cleaning solvents specified in IEC 60115-1 <sup>(1)</sup>. Production is strictly controlled and follows an extensive set of instructions established for reproducibility. The winding is done with a specific material on a specially developed fine ceramic body (Al<sub>2</sub>O<sub>3</sub>). The ceramic meets the highest requirements against mechanical resistance, thermal shocks, dielectric strength, and insulation resistance at high temperatures. With different diameters and turn spacing's, a large ohmic value range can be covered. The resistors are marked with resistance value, tolerance and impulse rating.

The result of the determined production is verified by an extensive testing procedure performed on 100 % of the individual resistors. Only accepted products are stuck directly on the adhesive tapes in accordance with IEC 60286-1 (for axial leaded) or for the radial versions in accordance with IEC 60286-2 or blister taped for the WSZ version in accordance with IEC 60286-3.

Product quality is verified by testing procedures, performed on all individual resistors. Resistance is measured on the lead wires at a distance of 6 mm from the resistor body. If a greater length of lead wire is used in the application, the user may need to consider the additional wire resistance, particularly with low resistance products.

**MATERIALS**

Vishay acknowledges the following systems for the regulation of hazardous substances:

- IEC 62474, Material Declaration for Products of and for the Electrotechnical Industry, with the list of declarable substances given therein <sup>(2)</sup>
- The Global Automotive Declarable Substance List (GADSL) <sup>(3)</sup>
- The REACH regulation (1907/2006/EC) and the related list of substances with very high concern (SVHC) <sup>(4)</sup> for its supply chain

The products do not contain any of the banned substances as per IEC 62474, GADSL, or the SVHC list, see [www.vishay.com/how/leadfree](http://www.vishay.com/how/leadfree). Hence the products fully comply with the following directives:

- 2000/53/EC End-of-Life Vehicle Directive (ELV) and Annex II (ELV II)
- 2011/65/EU Restriction of the Use of Hazardous Substances Directive (RoHS) with amendment 2015/863/EU
- 2012/19/EU Waste Electrical and Electronic Equipment Directive (WEEE)

Vishay pursues the elimination of conflict minerals from its supply chain, see the Conflict Minerals Policy at [www.vishay.com/doc?49037](http://www.vishay.com/doc?49037).

**Notes**

- <sup>(1)</sup> Other cleaning solvents with aggressive chemicals should be evaluated in actual cleaning process for their suitability  
<sup>(2)</sup> The IEC 62474 list of declarable substances is maintained in a dedicated database, which is available at <http://std.iec.ch/iec62474>  
<sup>(3)</sup> The Global Automotive Declarable Substance List (GADSL) is maintained by the American Chemistry Council and available at [www.gadsl.org](http://www.gadsl.org)  
<sup>(4)</sup> The SVHC list is maintained by the European Chemical Agency (ECHA) and available at <http://echa.europa.eu/candidate-list-table>

**ASSEMBLY**

The resistors are axial or bend leads for soldering. Z bend leads offer SMD mounting compatibility. The terminals of the resistors are completely lead (Pb)-free, the special matte tin plating provides compatibility with lead (Pb)-free and lead-containing soldering processes.

Special lead forms may be available on request, please inquire at [ww1resistors@vishay.com](mailto:ww1resistors@vishay.com).

These components are high dissipation power resistors, customers are advised to use a high melting point solder.

**APPLICATION INFORMATION**

The power dissipation of the resistor generates a temperature rise with respect to the ambient. The permissible dissipation is derated for temperatures above 40 °C, as shown in the derating diagram, in order to avoid overheating of the resistor. The heat dissipated from the resistor may affect adjacent components, hence proper clearance will be required in order to avoid overheating. The resistive wire is hermetically encapsulated.

All materials used are non-flammable and inorganic. These resistors do not feature a limited lifetime when operated within the permissible limits. However, resistance value drift increasing over operating time may result in exceeding a limit acceptable to the specific application, thereby establishing a functional lifetime.

## HIGH VOLTAGE IMPULSE

The specially designed Z300-Cxx high surge wirewound resistors are tested for impulse handling capability by applying impulse voltage as per the 1.2 / 50  $\mu$ s exponential open circuit voltage waveform according to IEC 61000-4-5 standard as shown below:

Front time:  $T_1 = 1.67 \times T = 1.2 \mu\text{s} \pm 30 \%$   
Time to half-value:  $T_2 = 50 \mu\text{s} \pm 20 \%$

Waveform of open-circuit voltage (1.2 / 50  $\mu$ s) at the output of pulse generator

## TESTS PROCEDURES AND REQUIREMENTS

All tests are carried out in accordance with the following specifications:

- IEC 60115-1, generic specification (includes tests)

The test and requirements table contains only the most important tests. For the full test schedule refer to the documents listed above.

The tests are carried out with reference to IEC 60115-1, in accordance with IEC 60068-2-xx test method and under standard atmospheric conditions in accordance with IEC 60068-1, 4.3.

A climatic category 40 / 200 / 56 is applied, defined by the lower category temperature (LCT = -40 °C), the upper category temperature (UCT = 200 °C), and the duration of exposure in the damp heat, steady state test (56 days).

Unless otherwise specified the following values apply:

- Temperature: 15 °C to 35 °C
- Relative humidity: 45 % to 75 %
- Air pressure: 86 kPa to 106 kPa (860 mbar to 1060 mbar).

For performing some of the tests, the components are mounted on a test board in accordance with IEC 60115-1, 5.5.

In test procedures and requirements table, only the tests and requirements are listed with reference to the relevant clauses of IEC 60115-1 and IEC 60068-2-xx test methods. A short description of the test procedure is also given.
