## 16 x 2 Character OLED

#### **FEATURES**

• Type: character

• Display format: 16 x 2 characters

• Built-in controller: OLED-0010

Duty cycle: 1/16+3 V power supplyInterface: SSD1311

• Material categorization: for definitions of compliance

please see www.vishav.com/doc?99912

MECHANICAL DATA							
ITEM	STANDARD VALUE	UNIT					
Module dimension	68.5 x 17.5 x 2.05						
Viewing area	58.22 x 13.52						
Active area	56.22 x 11.52						
Dot size	0.57 x 0.67						
Dot pitch	0.60 x 0.70	mm					
Mounting hole	n/a						
Character size	2.97 x 5.57						
Character pitch	3.55 x 5.95

## 4. Interface Pin Function

Pin No.	Symbol	Pin Type	Description					
1	NC	_	No connection					
2	VSL	P	This is segment voltage (output low level) reference pin. When external VSL is not used, this pin should be left open. When external VSL is used, connect with resistor and diode to ground (details depend on application).					
3	VSS	P	Ground pin. It must be connected to external ground.					
4	REGVDD	I	Internal VDD regulator selection pin in 5V I/O application mode. When this pin is pulled HIGH, internal VDD regulator is enabled (5V I/O application). When this pin is pulled LOW, internal VDD regulator is disabled (Low voltage I/O application).					
			This pin is used to determine the Common output scanning direction. COM scan direction					
			SHLC COM scan direction					
5	5 SHLC	SHLC	I	1 COM0 to COM31 (Normal)				
3			SHEC	SHLC	SILC	1	0 COM31 to COM0 (Reverse)	
							Note	
			(1) 0 is connected to VSS					
			(2) 1 is connected to VDDIO					
						This pin is used to change the mapping between the display data		
			column address and the Segment driver.					
				SEG scan direction				
			SHLS SEG direction					
6	SHLS	I	1 SEG0 to SEG99 (Normal)					
			0 SEG99 to SEG0 (Reverse)					
			Note					
			(1) 0 is connected to VSS					
			(2) 1 is connected to VDDIO					
			Power supply for core logic operation.					
			VDD can be supplied externally or regulated internally.					
			In LV IO application (internal VDD is disabled), this is a power input					
7	VDD	P	pin.					
			In 5V IO application (internal VDD is enabled), VDD is regulated					
			internally from VDDIO.					
			A capacitor should be connected between VDD and VSS under all					
			circumstances.  Low voltage power supply and power supply for interface logic level					
			in both Low Voltage I/O and 5V I/O application. It should match					
8	VDDIO	P	with the MCU interface voltage level and must be connected to					
			external source.					
9	BS0		MCU bus interface selection pins. Select appropriate logic setting					
		I	as described in the following table. BS2, BS1 and BS0 are pin select.					
10	BS1		Bus Interface selection					

			BS[2:0] Interface						
			000 Serial Interface						
			001 Invalid						
			010 1 <sup>2</sup> C						
			011 Invalid						
	7.00		100 8-bit 6800 parallel						
11	BS2		101 4-bit 6800 parallel						
			110 8-bit 8080 parallel						
			111 4-bit 8080 parallel						
			Note						
			(1) 0 is connected to VSS						
			(2) 1 is connected to VDDIO						
12	GPIO	I/O	It is a GPIO pin. Details refer to OLED command DCh.						
			This pin is the chip select input connecting to the MCU.						
		_	The chip is enabled for MCU communication only when CS# is						
13	CS#	I	pulled LOW (active LOW).						
			<del> </del>						
			In I2C mode, this pin must be connected to VSS.						
<b>.</b>		_	This pin is reset signal input.						
14	RES#	4 RES#	I	When the pin is pulled LOW, initialization of the chip is executed.					
			Keep this pin pull HIGH during normal operation.						
							This pin is Data/Command control pin connecting to the MCU.		
						When the pin is pulled HIGH, the data at D[7:0] will be interpreted			
			as data.						
15	D/C#	I							
13	D/C#	D/C# 1	When the pin is pulled LOW, the data at D[7:0] will be transferred to						
			a command register.						
			In I2C mode, this pin acts as SA0 for slave address selection.						
			When serial interface is selected, this pin must be connected to VSS.						
			This pin is read / write control input pin connecting to the MCU						
			interface.						
			When 6800 interface mode is selected, this pin will be used as						
			_						
			Read/Write (R/W#) selection input. Read mode will be carried out						
16	R/W#(WR#)	I	when this pin is pulled HIGH and write mode when LOW.						
10	16 1111 (11161)	•	When 8080 interface mode is selected, this pin will be the Write						
			(WR#) input. Data write operation is initiated when this pin is pulled						
			LOW and the chip is selected.						
			When serial or I2C interface is selected, this pin must be connected						
			to VSS.						
			This pin is MCU interface input.						
			When 6800 interface mode is selected, this pin will be used as the						
			Enable (E) signal.						
			Read/write operation is initiated when this pin is pulled HIGH and						
17	E(DD#)	I	the chip is selected.						
1 /	E(RD#)	1	When 8080 interface mode is selected, this pin receives the Read						
			(RD#) signal. Read operation is initiated when this pin is pulled						
			LOW and the chip is selected.						
			When serial or I2C interface is selected, this pin must be connected						
			to VSS.						
18	D0	T/0	These pins are bi-directional data bus connecting to the MCU data						
19	D1	I/O	bus.						
19	וע		Unused pins are recommended to tie LOW.						

20	D2		When serial interface mode is selected, D0 will be the serial clock
			input: SCLK; D1 will be the serial data input: SID and D2 will be the
21	D3		serial data output: SOD.
22	D4		When I2C mode is selected, D2, D1 should be tied together and serve as SDAout, SDAin in application and D0 is the serial clock input,
23	D5		SCL.
24	D6		
25	D7		
26	IREF	I	This pin is the segment output current reference pin. IREF is supplied externally. A resistor should be connected between this pin and VSS to maintain current of around 15uA.
27	ROM0	I	These pins are used to select Character ROM; select appropriate logic setting as described in the following table. ROM1 and ROM0 are pin select as shown in below table:  Character ROM selection  ROM1 ROM0 ROM 0 0 A
28	ROM1	1	0 1 B 1 0 C 1 I S/W selectable (3)  Note (1) 0 is connected to VSS (2) 1 is connected to VDDIO
29	OPR0	I	This pin is used to select the character number of character generator.  Character RAM selection  OPRI OPRO CGROM CGRAM  1 1 256 0 0 1 248 8
30	OPR1		1
31	VCOMH	P	COM signal deselected voltage level. A capacitor should be connected between this pin and VSS. No external power supply is allowed to connect to this pin.
32	VCC	P	Power supply for panel driving voltage. This is also the most positive power voltage supply pin. It is supplied by external high voltage source.
33	NC	_	No connection

Vishay

## **5.Absolute Maximum Ratings**

Item	Symbol	Min	Max	Unit	Notes
Supply Voltage For Logic	VDDIO	-0.3	3.6	V	
Operating Temperature	Тор	-40	+80	$^{\circ}\!\mathbb{C}$	
Storage Temperature	Tst	-40	+80	$^{\circ}$ C	

Note 1: All the above voltages are on the basis of "VSS = 0V".

Note 2: When this module is used beyond the above absolute maximum ratings, permanent breakage of the module may occur. Also, for normal operations, it is desirable to use this module under the conditions according to Section 6 "Electrical Characteristics". If this module is used beyond these conditions, malfunctioning of the module can occur and the reliability of the module may deteriorate

Vishay

# **6.Electrical Characteristics**

ltem	Symbol	Condition	Min	Тур	Max	Unit

## **8.OLED Lifetime**

ITEM	Conditions	Min	Тур	Remark
Operating Life Time	Ta=25°ℂ / Initial 50% check board brightness Typical Value	20,000 Hrs	_	Note

#### Notes:

- 1. Life time is defined the amount of time when the luminance has decayed to <50% of the initial value.
- 2. This analysis method uses life data obtained under accelerated conditions to extrapolate an estimated probability density function (*pdf*) for the product under normal use conditions.
- 3. Screen saving mode will extend OLED lifetime.

## OLED-016O002C-SPP3N00000

Vishay

#### Test and measurement conditions

- All measurements shall not be started until the specimens attain to temperature stability.
   After the completion of the described reliability test, the samples were left at room temperature for 2 hrs prior to conducting the failure test at 23±5°C; 55±15% RH.
- 2. All-pixels-on is used as operation test pattern.
- 3. The degradation of Polarizer are ignored for High Temperature storage, High Temperature/ Humidity Storage, Temperature Cycle

#### **Evaluation criteria**

- 1. The function test is OK.
- 2. No observable defects.
- 3. Luminance: > 50% of initial value.
- 4. Current consumption: within ± 50% of initial value.

#### **APPENDIX:**

#### **RESIDUE IMAGE**

Because the pixels are lighted in different time, the luminance of active pixels may reduce or differ from inactive pixels. Therefore, the residue image will occur. To avoid the residue image, every pixel needs to be lighted up uniformly.

## 11.Precautions in use of OLED Modules

## **Modules**

- (1)Avoid applying excessive shocks to module or making any alterations or modifications to it.
- (2)Don't make extra holes on the printed circuit board, modify its shape or change the components of OLED display module.
- (3)Don't disassemble the OLED display module.
- (4)Don't operate it above the absolute maximum rating.
- (5)Don't drop, bend or twist OLED display module.
- (6) Soldering: only to the I/O terminals.
- (7)Storage: please storage in anti-static electricity container and clean environment.
- (8)It's pretty common to use "Screen Saver" to extend the lifetime and Don't use fix information for long time in real application.
- (9)Don't use fixed information in OLED panel for long time, that will extend "screen burn" effect time.
- (10) Vishay has the right to change the passive components, including R2and R3 adjust resistors. (Resistors, capacitors and other passive components will have different appearance and color caused by the different supplier.)
- (11) Vishay have the right to change the PCB Rev. (In order to satisfy the supplying stability, management optimization and the best product performance...etc, under the premise of not affecting the electrical characteristics and external dimensions, Vishay have the right to modify the version.)

#### 11.1. Handling Precautions

- (1) Since the display panel is being made of glass, do not apply mechanical impacts such us dropping from a high position.
- (2) If the display panel is broken by some accident and the internal organic substance leaks out, be careful not to inhale nor lick the organic substance.
- (3) If pressure is applied to the display surface or its neighborhood of the OLED display module, the cell structure may be damaged and be careful not to apply pressure to these sections.
- (4) The polarizer covering the surface of the OLED display module is soft and easily scratched. Please be careful when handling the OLED display module.
- (5) When the surface of the polarizer of the OLED display module has soil, clean the surface. It takes advantage of by using following adhesion tape.
  - \* Scotch Mending Tape No. 810 or an equivalent
  - Never try to breathe upon the soiled surface nor wipe the surface using cloth containing solvent

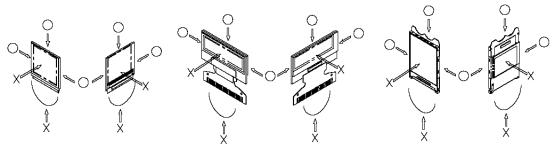

such as ethyl alcohol, since the surface of the polarizer will become cloudy.

Also, pay attention that the following liquid and solvent may spoil the polarizer:

- \* Water
- \* Ketone
- \* Aromatic Solvents
- (6) Hold OLED display module very carefully when placing OLED display module into the System housing. Do not apply excessive stress or pressure to OLED display module. And, do not over bend the film with electrode pattern layouts.
  - These stresses will influence the display performance. Also, secure sufficient rigidity for the outer cases.

Vishay

- (7) Do not apply stress to the LSI chips and the surrounding molded sections.
- (8) Do not disassemble nor modify the OLED display module.
- (9) Do not apply input signals while the logic power is off.
- (10) Pay sufficient attention to the working environments when handing OLED display modules to prevent occurrence of element breakage accidents by static electricity.
- \* Be sure to make human body grounding when handling OLED display modules.
- \* Be sure to ground tools to use or assembly such as soldering irons.
- \* To suppress generation of static electricity, avoid carrying out assembly work under dry environments.
- \* Protective film is being applied to the surface of the display panel of the OLED display module. Be careful since static electricity may be generated when exfoliating the protective film.
- (11) Protection film is being applied to the surface of the display panel and removes the protection film before assembling it. At this time, if the OLED display module has been stored for a long period of time, residue adhesive material of the protection film may remain on the surface of the display panel after removed of the film. In such case, remove the residue material by the method introduced in the above Section 5.
- (12) If electric current is applied when the OLED display module is being dewed or when it is placed under high humidity environments, the electrodes may be corroded and be careful to avoid the above.

#### 11.2. Storage Precautions

(1) When storing OLED display modules, put them in static electricity preventive bags avoiding exposure to direct sun light nor to lights of fluorescent lamps. and, also, avoiding high temperature and high humidity environment or low temperature (less than 0°C) environments.

(We recommend you to store these modules in the packaged state when they were shipped from Vishay.

At that time, be careful not to let water drops adhere to the packages or bags nor let dewing occur with them.

(2) If electric current is applied when water drops are adhering to the surface of the OLED display module, when the OLED display module is being dewed or when it is placed under high humidity environments, the electrodes may be corroded and be careful about the above.

#### 11.3. Designing Precautions

- (1) The absolute maximum ratings are the ratings which cannot be exceeded for OLED display module, and if these values are exceeded, panel damage may be happen.
- (2) To prevent occurrence of malfunctioning by noise, pay attention to satisfy the VIL and VIH specifications and, at the same time, to make the signal line cable as short as possible.
- (3) We recommend you to install excess current preventive unit (fuses, etc.) to the power circuit (VDD). (Recommend value: 0.5A)
- (4) Pay sufficient attention to avoid occurrence of mutual noise interference with the neighboring devices.
- (5) As for EMI, take necessary measures on the equipment side basically.

## OLED-016O002C-SPP3N00000

www.vishay.com

Vishay

- (6) When fastening the OLED display module, fasten the external plastic housing section.
- (7) If power supply to the OLED display module is forcibly shut down by such errors as taking out the main battery while the OLED display panel is in operation, we cannot guarantee the quality of this OLED display module.
- \* Connection (contact) to any other potential than the above may lead to rupture of the IC.

#### 11.4. Precautions when disposing of the OLED display modules

1) Request the qualified companies to handle industrial wastes when disposing of the OLED display modules. Or, when burning them, be sure to observe the environmental and hygienic laws and regulations.

#### 11.5. Other Precautions

- (1) When an OLED display module is operated for a long of time with fixed pattern may remain as an after image or slight contrast deviation may occur.
- Nonetheless, if the operation is interrupted and left unused for a while, normal state can be restored. Also, there will be no problem in the reliability of the module.
- (2) To protect OLED display modules from performance drops by static electricity rapture, etc., do not touch the following sections whenever possible while handling the OLED display modules.
- \* Pins and electrodes
- \* Pattern layouts such as the TCP & FPC
- (3) With this OLED display module, the OLED driver is being exposed. Generally speaking, semiconductor elements change their characteristics when light is radiated according to the principle of the solar battery. Consequently, if this OLED driver is exposed to light, malfunctioning may occur.
- \* Design the product and installation method so that the OLED driver may be shielded from light in actual usage.
- \* Design the product and installation method so that the OLED driver may be shielded from light during the inspection processes.
- (4) Although this OLED display module stores the operation state data by the commands and the indication data, when excessive external noise, etc. enters into the module, the internal status may be changed. It therefore is necessary to take appropriate measures to suppress noise generation or to protect from influences of noise on the system design.
- (5) We recommend you to construct its software to make periodical refreshment of the operation statuses (re-setting of the commands and re-transference of the display data) to cope with catastrophic noise.
- (6)Resistors, capacitors and other passive components will have different appearance and color caused by the different supplier.
- (7)Our company will has the right to upgrade and modify the product function.
