Notes

- Glue pad (non-conductive, part of molded case) is dedicated for glue attachment (as user option)
- Mechanical variations in anode and/or cathode terminations on tantalum capacitors manufactured by various Vishay plants are normal and will not impact the capacitor's form, fit, and function. Examples of termination shapes:

Marking

Capacitor marking includes an anode (+) polarity band, capacitance in microfarads and the voltage rating. "A" case capacitors use a letter code for the voltage and EIA capacitance code.

The Vishay identification marking is included if space permits. Vishay marking ("circled 2") may show additives in the form of short lines, depicting actual manufacturing facility. For A case capacitors discontinuation in polarity bar maybe used as actual manufacturing facility designation. Capacitors rated at 6.3 V are marked 6 V.

A manufacturing date code is marked on all capacitors, for details see FAQ: www.vishay.com/doc?40110.

Capacitors may bear different marking scheme if parts are substituted with high performance Vishay Automotive Grade TP3 family or low DCL TX3 family products. Marking examples are shown below. Call the factory for further explanation.
