

High Speed Optocoupler, Dual Channel, 1 MBd, Transistor Output

i179026

RoHS
COMPLIANT

FEATURES

- Isolation test voltage, 5300 V_{RMS}
- TTL compatible
- Bit rates: 1 MBit/s
- High common mode transient immunity
- Bandwidth 2 MHz
- Open collector output
- Material categorization: for definitions of compliance please see www.vishay.com/doc?99912

DESCRIPTION

The SFH6325 and SFH6326 are dual channel optocouplers with a GaAlAs infrared emitting diode, optically coupled with an integrated photo detector which consists of a photo diode and a high-speed transistor in a DIP-8 plastic package. Signals can be transmitted between two electrically separated circuits up to frequencies of 2 MHz. The potential difference between the circuits to be coupled should not exceed the maximum permissible reference voltages.

Notes

- Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operational sections of this document. Exposure to absolute maximum ratings for extended periods of the time can adversely affect reliability.
- (1) Refer to reflow profile for soldering conditions for surface mounted devices (SMD). Refer to wave profile for soldering conditions for through hole devices (DIP).

Notes

- $T_{amb} = 0 \text{ }^{\circ}\text{C}$ to $70 \text{ }^{\circ}\text{C}$, unless otherwise specified, typical values $T_{amb} = 25 \text{ }^{\circ}\text{C}$
- Minimum and maximum values are testing requirements. Typical values are characteristics of the device and are the result of engineering evaluation. Typical values are for information only and are not part of the testing requirements

⁽¹⁾ To measure crosstalk, turn on the LED for channel 1 and the output current for channel 2 in logic high. Repeat for channel 2
