

MLCC vs. VISHAY Tantalum

INTRODUCTION

Attached is a list of the MLCCs which are in short supply.

In crossing these parts, the first goal is to offer a polymer alternative to MLCC. If polymer is not available, then we can offer a standard tantalum.

The assumptions are as follows:

- we matched capacitance. Depending on application, user may be able to use lower value tantalum due to VCC and TCC which lower effective capacitance of MLCC
- we matched voltage rating. For polymer tantalum, it is ok. For standard tantalum, engineer should verify that application voltage meets 50 % derating guideline

CAPACITOR TYPE	DERATING GUIDELINE
MLCC	10 % to 20 %
Polymer tantalum	10 % to 20 %
Standard tantalum	50 %

- we did not consider ESR or DCL since these performance parameters are significantly different for each capacitor type and should be checked relative to the needs of the application
