

PFAS Statement

Including but not limited to the following:
U.S. EPA's TSCA Section 8(a)(7) reporting and TRI requirements
REACH regulation (EC) No 1907/2006 and the associated PFAS restriction proposals
Regional regulations such as state-level mandates in California, Minnesota, Maine
Canadian PFAS reporting obligations

September 1, 2025

Dear Valued Customer,

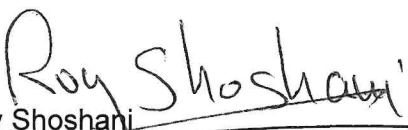

Vishay Intertechnology, Inc. is committed to be in compliance with all applicable global laws, directives and regulations.

Per- and Polyfluoroalkyl substances (PFAS) are a broad class of synthetic chemicals. These substances are extremely resistant to degradation. They are being identified as environmental pollutants, some of them are linked to negative effects on human health.

We actively participate in industry associations and stay current on global regulatory developments and contribute to the development of practical, science-based policies. We are aware of current technological constraints that limit full PFAS elimination in some semiconductor and electronics industry applications. PFAS mapping is an ongoing process, and we are continuing to improve it.

As part of our commitment to reduce the environmental footprint of our operations, we regularly evaluate regulatory developments, our environmental stewardship, and stakeholder expectations. We will continue our work to provide our customers with accurate and reliable information about PFAS in our products.

Please feel free to contact us if you have any further questions.

Roy Shoshani
Executive Vice President
COO – Semiconductors and CTO
Vishay Intertechnology, Inc.
