

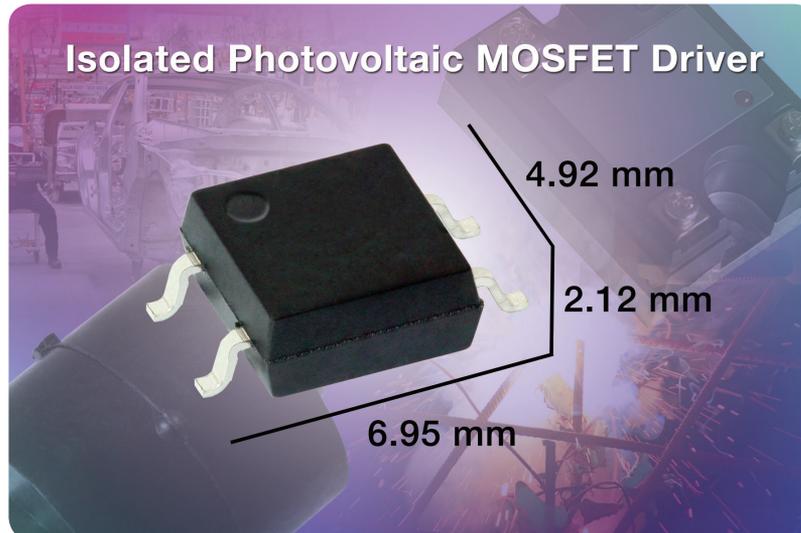

## Photovoltaic MOSFET Driver with Integrated Fast Turn-Off

Vishay's new VOM1271 isolated photovoltaic MOSFET driver with integrated turnoff circuit is packaged in the space-saving surface-mount SOP-4. Eliminating the need for an external power supply, the VOM1271 simplifies the task of driving a wide variety of power MOSFETs. Used in industrial electrical and electromechanical applications, the VOM1271 greatly reduces implementation cost and PCB space usage, while increasing overall system reliability and performance with its solid-state design.

### KEY BENEFITS

- Small SOP-4 footprint
- Integrated fast turn-off circuit
- No need for external secondary  $V_{CC}$

### APPLICATIONS

- High-voltage and/or high-current MOSFET SSR implementations
- Solid-state solenoid drivers
- Industrial control MOSFET drive applications

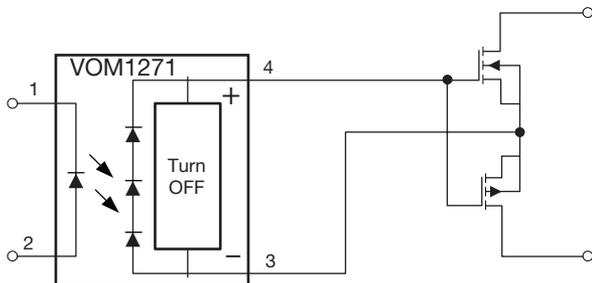

### RESOURCES

- Datasheet: VOM1271 - <http://www.vishay.com/doc?83469>
- Optocoupler product portfolio <http://www.vishay.com/optocouplers/>
- Technical support: [optocoupleranswers@vishay.com](mailto:optocoupleranswers@vishay.com)
- Sales contacts: <http://www.vishay.com/doc?99914>
- Material categorization: For definitions of compliance please see <http://www.vishay.com/doc?99912>

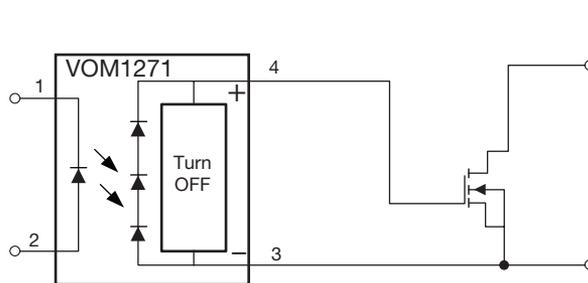

One of the World's Largest Manufacturers of  
Discrete Semiconductors and Passive Components

**APPLICATION CIRCUITS**

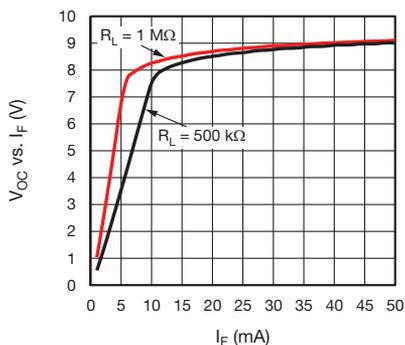

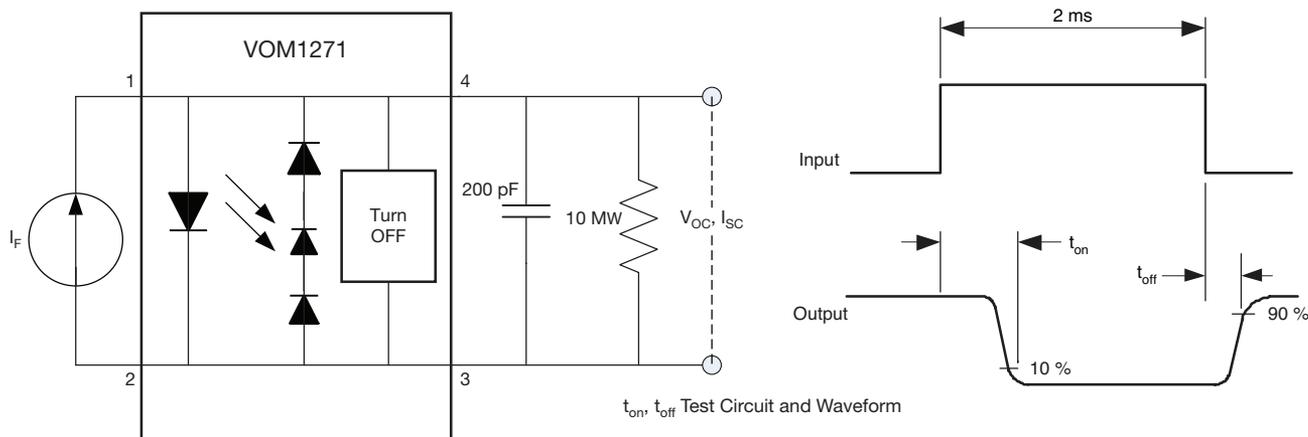

Bidirectional MOSFET Driver Application

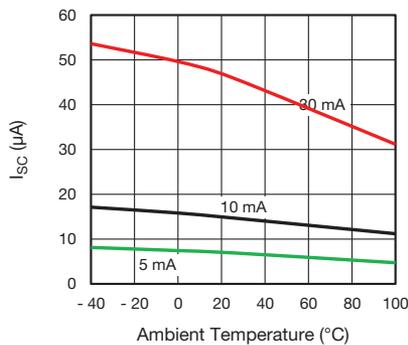

Single MOSFET Driver Application

**VOM1271 KEY PERFORMANCE DATA**
**SWITCHING CHARACTERISTICS (T<sub>amb</sub> = 25 °C, UNLESS OTHERWISE SPECIFIED)**

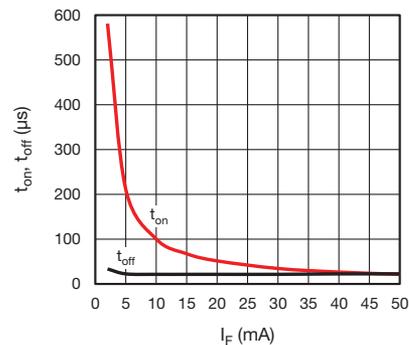

| PARAMETER     | TEST CONDITION   | SYMBOL           | MIN. | TYP. | MAX. | UNIT |
|---------------|--|------------------|------|------|------|------|
| Turn-on time  | C <sub>L</sub> = 200 pF, I <sub>F</sub> = 20 mA,<br>P <sub>W</sub> = 2 ms, duty cycle = 50 % | t <sub>on</sub>  |      | 53   |      | μs   |
| Turn-off time |  | t <sub>off</sub> |      | 24   |      | μs   |

Output Open Circuit Voltage vs. LED Current

Output Short-Circuit Current vs. Ambient Temperature

 t<sub>on</sub>, t<sub>off</sub> vs. LED Current
