RECOMMENDATIONS FOR MOUNTING ONTO A HEATSINK

- Surfaces in contact must be carefully cleaned.
- The heatsink must have an acceptable flatness: From 0.05 mm to 0.1 mm/100 mm.
- Roughness of the heatsink must be around 6.3 μm. In order to improve thermal conductivity, surfaces in contact (alumina, heatsink) should be coated with a silicone grease (type Bluesil Past 340 from BlueStar Silicones) or a thermal film (type Q Pad II) easier and faster to install than the grease.
- The fastening of the resistor to the heatsink is under pressure control of two screws tightened at 2 Nm for full power availability.

• The following accessories are supplied with each product:
  - 2 screws CHC M4 x 25 class 8.8 and 2 M4 contact lock washers for heatsink mounting
  - 2 screws TH M4 x 6/6 and 2 M4 contact lock washers for connections.

CHOICE OF THE HEATSINK

The user must choose the heatsink according to the working conditions of the component (power, room temperature). Maximum working temperature must not exceed 175 °C. The dissipated power is simply calculated by the following ratio:

\[
P = \frac{\Delta T}{R_{TH\ (j-c)} + R_{TH\ (c-h)} + R_{TH\ (h-a)}}
\]

P: Expressed in W
\(\Delta T\): Difference between maximum working temperature and room temperature
\(R_{TH\ (j-c)}\): Thermal resistance between maximum working temperature and room temperature
\(R_{TH\ (c-h)}\): Thermal resistance value measured between resistive layer and outer side of the resistor.
\(R_{TH\ (h-a)}\): Thermal resistance of the heatsink.

Example:

\(R_{TH\ (c-a)}\) for LPS 800 power dissipation 180 W at +50 °C room temperature.

\[
\Delta T \leq 175 ^\circ C - 50 ^\circ C = 125 ^\circ C
\]

\[
R_{TH\ (j-c)} + R_{TH\ (c-h)} + R_{TH\ (h-a)} = \frac{\Delta T}{P} = \frac{125}{180} = 0.69 ^\circ C/W
\]

\(R_{TH\ (j-c)} = 0.112 ^\circ C/W\)

\(R_{TH\ (c-h)} + R_{TH\ (h-a)} = 0.69 ^\circ C/W - 0.112 ^\circ C/W = 0.578 ^\circ C/W\)
Notes

• Configuration 1: Water cooling heatsink CP15 from Lytron (304 mm x 95.3 mm x 8 mm) with water flow rate 4 LPM and thermal grease Bluesil Past 340 from BlueStar silicones.
• Configuration 2: Air cooling heatsink P207/250 from Semikron (250 mm x 200 mm x 72 mm) and thermal grease Bluesil Past 340 from BlueStar silicones.
• Configuration 3: Water cooling heatsink CP15 from Lytron (304 mm x 95.3 mm x 8 mm) with water flow rate 4 LPM and thermal pad Q-Pad II from Berquist.
• Configuration 4: Air cooling heatsink P207/250 from Semikron (250 mm x 200 mm x 72 mm) and thermal pad Q-Pad II from Berquist.

OVERLOADS

In any case the applied voltage must be lower than $U_L = 5000$ V.

Short time overload: $1.5 \times P_r / 10$ s

Accidental overload: The values indicated on the following graph are applicable to resistors in air or mounted onto a heatsink.

POWER CURVE

The temperature of the case should be maintained within the limits specified in the following figure. To optimize the thermal conduction, contacting surfaces should be coated with silicone grease or thermal film, and heatsink mounting screws tightened to 2 Nm.
