AEC-Q200 Qualified
High Frequency 70 GHz Thin Film Chip Resistor

FEATURES

- Operating frequency 70 GHz
- AEC-Q200 qualified
- Thin film microwave resistors
- Ohmic range: 10 Ω to 500 Ω
- Design kits available
- Modelithics® library available
- Small internal reactance (LC down to 1 x 10^{-24})
- Material categorization: for definitions of compliance please see www.vishay.com/doc?99912

Pb-free
RoHS COMPLIANT
HALOGEN FREE
GREEN (5-2008)

Those miniaturized components are designed in such a way that their internal reactance is very small. When correctly mounted and utilized, they function as almost pure resistors on a very large range of frequency, up to 70 GHz from 10 Ω to 500 Ω.

PREFERRED MODELS AND VALUES

Recommended Values:

10 Ω / 18 Ω / 25 Ω / 50 Ω / 75 Ω / 100 Ω / 150 Ω / 180 Ω / 200 Ω / 250 Ω / 330 Ω / 500 Ω

Those values are available with a **MOQ of 100 pieces.**

Recommended termination:

F

Recommended tolerance:

2 %

Other values can be ordered upon request, but higher MOQ will apply: 1000 pieces for CHA02016.

DESIGN KITS

Design kits are available ex stock in CHA02016. There are 20 pieces per recommended value. F termination.

5 % tolerance.

Those kits are packaged in pieces of tape and delivered in ESD bags.

TEST BOARDS

TRL (Thru Reflect Line) and DUT (Device Under Test) evaluation boards (50 Ω or 100 Ω) are available on request.

PACKAGING

Standard packaging is plastic tape and reel for all sizes.

Flip chip:

Tin / silver terminations (F termination option): Active face down in tape and reel.
Active face up in waffle pack.

One face:

Gold terminations (P termination option): Active face up.
Please use M termination code for active face down in tape and reel.

Notes

- CHA02016 with active face down in tape and reel have back-side blue marked to indicate right orientation
- Please refer to Vishay Sfernice Application Note "Guidelines for Vishay Sfernice Resistive and Inductive Components" for soldering recommendation (document number 52029, section "3. Guidelines for Surface Mounting Components (SMD)", profile number 3 applies

SIZE	MOQ	NUMBER OF PIECES PER PACKAGE			TAPE WIDTH
		WAFFLE PACK 2" x 2"	TAPE AND REEL		
			MIN.	MAX.	
02016	See MOQ mentioned on preferred models and values	484	100	5000	8 mm

PACKAGING RULES

Waffle Pack

Can be filled up to maximum quantity indicated in the table here above, taking into account the minimum order quantity. When quantity ordered exceeds maximum quantity of a single waffle pack, the waffle packs are stacked up on the top of each other and closed by one single cover. To get "not stacked up" waffle pack in case of ordered quantity > maximum number of pieces per package: please consult Vishay Sfernice for specific ordering code.

Tape and Reel

See Part Numbering information to get the quantity desired by tape.

In regard to the CHA02016 size only, up to 5 empty cavities can be found every 1000 parts in the reel. Nevertheless, the number of requested parts will be respected.

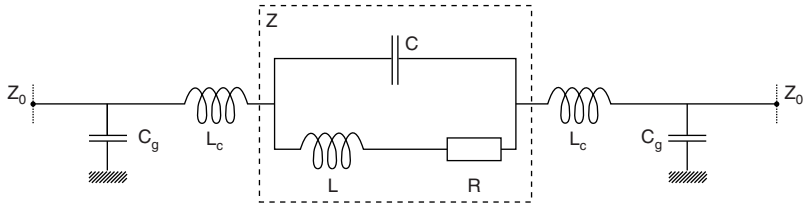
TYPICAL HIGH FREQUENCY PERFORMANCE ELECTRICAL MODEL



C	Internal shunt capacitance
L	Internal inductance
R	Resistance
Z	Internal impedance (R, L, C)
L_c	External connection inductance
C_g	External capacitance to ground

The complex impedance of the chip resistor is given by the following equations:

$$Z = \frac{R + j\omega(L - R^2C - L^2C\omega^2)}{1 + C[(R^2C - 2L)\omega^2 + L^2C\omega^4]}$$

$$\frac{[Z]}{R} = \frac{1}{1 + C[(R^2C - 2L)\omega^2 + L^2C\omega^4]} \times \sqrt{1 + \left[\frac{\omega(L - R^2C - L^2C\omega^2)}{R}\right]^2}$$

$$\theta = \tan^{-1}\frac{\omega(L - R^2C - L^2C\omega^2)}{R}$$

Notes

- $\omega = 2 \times \pi \times f$
- *f*: frequency

R, L and C are relevant to the chip resistor itself.

L_c and C_g also depend on the way the chip resistor is mounted.

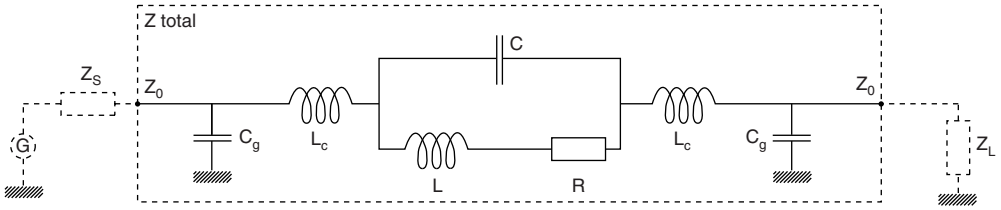
It is important to notice that after assembly the external reactance of L_c and C_g will be combined to internal reactance of L and C. This combination can upgrade or downgrade the HF behavior of the component.

This is why we are displaying three sets of data:

- $\frac{[Z]}{R}$ versus frequency curves which aim to show at a glance the intrinsic HF performance of a given chip resistor
- $\frac{[Z_{total}]}{R}$ versus frequency curves which aim to show the behavior of the chip resistor when mounted

These lines are terminated with adapted source and load impedance respectively Z_s and Z_l with $Z_0 = Z_L = Z_s$ (for others configurations please consult us).

Equivalent circuit for S-parameters:



S-parameters are computed taking into account all the resistive, inductive and capacitive elements (Z total) and $Z_0 = Z_L = Z_s = R$.

For simulation purposes, those S-parameter data are available for download here: www.vishay.com/doc?53061
