## Powered-off Protection, $0.7 \Omega, 1.8 \mathrm{~V}$ to 5.5 V , SPST Analog Switch

## DESCRIPTION

The DG2715E, DG2716E are single-pole, single-throw (SPST) analog switches designed for +1.8 V to +5.5 V operation with a single power rail. Fabricated with high density CMOS technology, the device achieves low on resistance of $0.7 \Omega$ at a 5 V power supply, fast switching speeds (ton, toff at 13 ns and 11 ns ), and low power consumption.
The DG2715E, DG2716E feature low control logic input threshold. This logic inputs can go over $\mathrm{V}+$ up to 5.5 V . Additionally, on-resistance flatness ( $0.15 \Omega$ ) offer high accuracy between channels.
The DG2715E contains a normally open (NO) switch, and the DG2716E contains a normally closed switch. All switches conduct both analog and digital signals equally well in either directions when on, permit signals with amplitudes of up to $\mathrm{V}+$, and block up to the power supply level when off. The DG2715E, DG2716E can withstand greater than 7 kV (human body model). A powered-off protection circuit is built into the switch to prevent an abnormal current flow from COM pin to V+during the power-down condition. The powered-off protection feature plus the switch's high ESD and latch up current capabilities make it more reliable in designs where the part sits close to the interface. Operation temperature is specified from $-40^{\circ} \mathrm{C}$ to $+85{ }^{\circ} \mathrm{C}$. The DG2715E, DG2716E are available in the compact SC-70-5 package.

## FEATURES

- Low switch on-resistance ( $0.7 \Omega$ at 5 V )
- 1.8 V to 5.5 V single supply operation
- Powered-off protection
- Control logic inputs can go over V+ up to 5.5 V

- Low charge injection (7 pC)
- Latch-up performance exceeds 300 mA per JESD 78
- ESD tested
- 7000 V human body model (JS-001)
- 1000 V charge device model (JS-002)
- Material categorization: for definitions of compliance please see www.vishay.com/doc?99912

## APPLICATIONS

- Smartphones and tablets
- Consumer and computing
- Portable instrumentation
- Audio and video signal routing
- Medical equipment

## Notes

a. All leads welded or soldered to PC board
b. Derate $3.1 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ above $70^{\circ} \mathrm{C}$

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
