

Low Power, High Sensitivity, I²C Ambient Light Sensor

DESCRIPTION

VEML3235 is an advanced ambient light sensor with I²C protocol interface and is designed by the CMOS process. It is easy to operate via a simple I²C command.

VEML3235 incorporates a photodiode, amplifiers, and analog circuits in a single chip. The best spectral sensitivity is used to closely capture real human eye responses. VEML3235 has excellent temperature compensation and the robust refresh rate setting does not need an external RC low pass filter. Software shutdown mode is provided, which reduces power consumption to be less than 1 μ A. VEML3235's operating voltage ranges from 2.6 V to 3.6 V. VEML3235 can detect a wide range of ambient light power.

FEATURES

- Package type: surface-mount
- Dimensions (L x W x H in mm): 2 x 2 x 0.87
- Integrated modules: ambient light sensor (ALS)
- Supply voltage range V_{DD}: 2.6 V to 3.6 V
- Communication via I²C interface
- I²C bus H-level range: 1.7 V to 3.6 V
- Floor life: 168 h, MSL 3, according to J-STD-020
- Low stand by current consumption: typ. 1 μ A
- Material categorization: for definitions of compliance please see www.vishay.com/doc?99912

APPLICATIONS

- Handheld device
- Notebook
- Consumer device
- Industrial and medical application
- Computing, and industrial devices and displays

AMBIENT LIGHT FUNCTION

- High ALS sensitivity with minimum detectable intensity of 0.0021 lx/cnt supports low transmittance lens design
- Excellent temperature compensation
- High dynamic detection resolution
- Software shutdown mode control

APPLICATION INFORMATION

1. Pin Connection With the Host

VEML3235 is a cost effective solution with I²C interface. The standard serial digital interface easily accesses “light intensity” without using complex calculations and programming by an external controller.

The additional capacitor near the V_{DD} pin in the circuit is used for power supply noise rejection. The value is recommended at 0.1 μF. The pull-high resistors for the I²C bus design are recommended to be 2.2 kΩ.

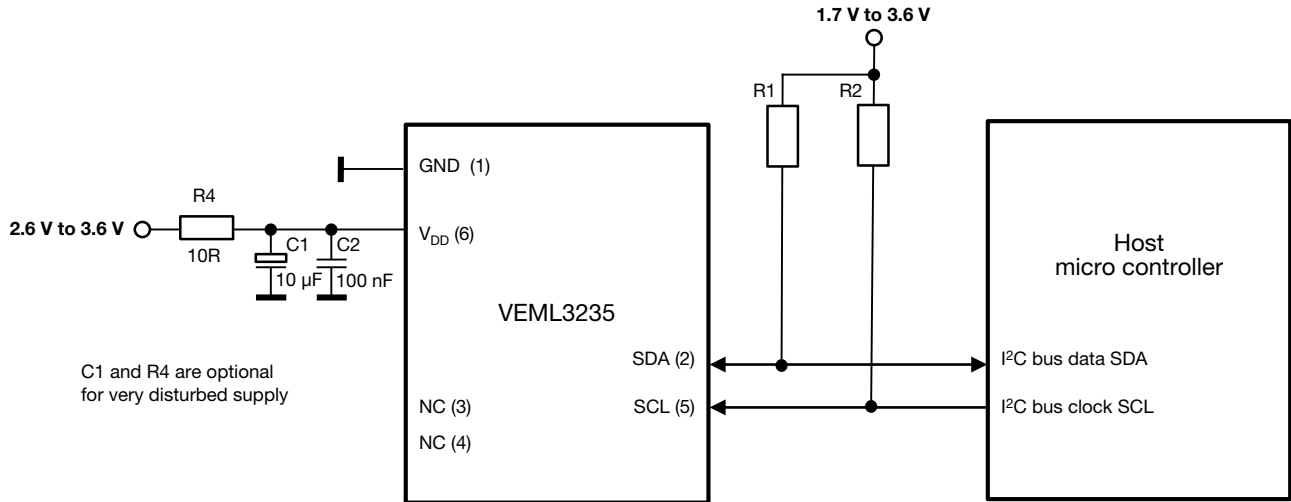

Fig. 8 - Hardware Pin Connection Diagram (Slave Address 0x10)

Digital Interface

VEML3235 contains a command register written via the I²C bus. All operations can be controlled by the command register. The simple command structure allows the user to easily program the operation setting and latch the light data from VEML3235. VEML3235’s I²C command format description for read and write operations between VEML3235 and the host is shown in Fig. 9. The white areas indicate the host activity and the gray areas indicate VEML3235’s acknowledgement of the host access activity.

Command Register Format

VEML3235 uses 0x10 slave address for 7-bit I²C addressing protocol. VEML3235 has 16-bit resolution for each channel (ALS and W).

DRYPACK

Devices are packed in moisture barrier bags (MBB) to prevent the products from moisture absorption during transportation and storage. Each bag contains a desiccant.

FLOOR LIFE

Floor life (time between soldering and removing from MBB) must not exceed the time indicated on MBB label:

Floor life: 168 h

Conditions: $T_{amb} < 30\text{ }^{\circ}\text{C}$, $\text{RH} < 60\text{ } \%$

Moisture sensitivity level 3, according to J-STD-020.

DRYING

In case of moisture absorption devices should be baked before soldering. Conditions see J-STD-020 or label. Devices taped on reel dry using recommended conditions 192 h at $40\text{ }^{\circ}\text{C}$ (+ $5\text{ }^{\circ}\text{C}$), $\text{RH} < 5\text{ } \%$.
