Exposure to absolute maximum ratings for extended periods of the time can adversely affect reliability
- Refer to wave profile for soldering conditions for through hole devices
- Total power dissipation value is based on 2S2P PCB. Refer to power phototriac application note for PCB design tips

The thermal resistance from board to ambient will be dependent on the type of PCB, layout and thickness of copper traces. For a detailed explanation of the thermal model, please reference Vishay's Thermal Characteristics of Power Phototriac application note
