**DESCRIPTION**

The VOL3120 consists of an infrared light emitting diode optically coupled to an integrated circuit with a power output stage. This optocoupler is ideally suited for driving power IGBTs and MOSFETs used in motor control and solar inverter applications. The high operating voltage range of the output stage provides the drive voltages required by gate controlled devices. The voltage and current supplied by this optocoupler makes it ideally suited for directly driving high power IGBTs with ratings up to 1000 V / 100 A. The low profile and small footprint of the VOL3120 makes it an ideal choice for applications where board space and component height are at a premium, while still offering a high degree of isolation performance.

**FEATURES**

- 2.5 A minimum peak output current
- 48 kV/μs minimum common mode rejection (CMR) at  $V_{CM} = 1500\text{ V}$
- Industrial temperature range:  $-40\text{ }^{\circ}\text{C}$  to  $+110\text{ }^{\circ}\text{C}$
- Wide operating  $V_{CC}$  range: 15 V to 32 V
- $I_{CC} = 2.5\text{ mA}$  maximum supply current
- 0.5 μs maximum propagation delay time
- Under voltage lock-out (UVLO) with hysteresis
- Material categorization: for definitions of compliance please see [www.vishay.com/doc?99912](http://www.vishay.com/doc?99912)

**APPLICATIONS**

- Isolated IGBT / MOSFET gate driver
- AC and brushless DC motor drives
- Induction stove top
- Industrial inverters
- Switch mode power supplies (SMPS)
- Uninterruptible power supplies (UPS)

**AGENCY APPROVALS**

The safety application model number covering all products in this datasheet is VOL3120. This model number should be used when consulting safety agency documents.

**Notes**

- Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operational sections of this document. Exposure to absolute maximum ratings for extended periods of the time can adversely affect reliability
- <sup>(1)</sup> Maximum pulse width = 10  $\mu\text{s}$ , maximum duty cycle = 0.2 %. This value is intended to allow for component tolerances for designs with  $I_O$  peak minimum = 2.5 A. See applications section for additional details on limiting  $I_{OH}$  peak
