IR Sensor Module for Remote Control Systems

DESCRIPTION
The TSMP98000 is a miniaturized sensor for receiving the modulated signal of infrared remote control systems. A PIN diode and preamplifier are assembled on a lead frame, the epoxy package is designed as an IR filter. The modulated output signal, carrier out, can be used for code learning applications.
This component has not been qualified according to automotive specifications.

FEATURES
- Photo detector and preamplifier in one package
- AC coupled response from 30 kHz to 60 kHz, all data formats
- Improved shielding against electrical field disturbance
- TTL and CMOS compatibility
- Output active low
- Supply voltage 2.0 V to 5.5 V
- Carrier out signal for code learning functions
- Material categorization: for definitions of compliance please see www.vishay.com/doc?99912

APPLICATIONS
- Infrared code learning

DESIGN SUPPORT TOOLS
- 3D models
- Window size calculator

BLOCK DIAGRAM
MECHANICAL DATA

Pinning:
1 = carrier OUT, 2 = GND, 3 = V_S

ORDERING CODE
TSMP98000 - 1500 pieces in bags

APPLICATION CIRCUIT

R_1 + C_1 recommended to suppress power supply disturbances.
R_2 recommended to get faster slopes and a correct high level of the output pulses.

Note
Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect the device reliability.
