

## IR Sensor Module for Remote Control Systems

19026

### DESCRIPTION

The TSMP98100 is a miniaturized sensor for receiving the modulated signal of infrared remote control systems. A PIN diode and preamplifier are assembled on a lead frame, the epoxy package is designed as an IR filter. The modulated output signal, carrier out, can be used for repeater applications and code learning applications.

This component has not been qualified according to automotive specifications.

### FEATURES

- Photo detector and preamplifier in one package
- AC coupled response from 30 kHz to 60 kHz, all data formats
- Improved shielding against electrical field disturbance
- AGC to suppress ambient noise
- High sensitivity, long receiving range
- Supply voltage: 2.0 V to 5.5 V
- Carrier out signal for IR repeater applications
- Material categorization: for definitions of compliance please see [www.vishay.com/doc?99912](http://www.vishay.com/doc?99912)

### APPLICATION CIRCUIT

Recommended circuit for best sensitivity in repeater applications. It limits the output voltage swing  $V_O$  to about 0.7 V in order to avoid internal coupling.
