# **IR Receiver Modules for Remote Control Systems**

www.vishay.com

## LINKS TO ADDITIONAL RESOURCES

## DESCRIPTION

SHA

The TSMP95100XV series are miniaturized SMD IR receiver modules for infrared remote control systems. A PIN diode and a preamplifier are assembled on a leadframe, the epoxy package contains an IR filter. The modulated output signal, carrier out, can be used for repeater applications and code learning applications.

These components have not been qualified according to automotive specifications.

## FEATURES

- High sensitivity and wide receiving angle
- AC coupled response from 30 kHz to 60 kHz, all data formats
- Improved shielding against electrical field disturbance
- AGC to suppress ambient noise
- High sensitivity, long receiving range
- Supply voltage: 2.0 V to 5.5 V
- · Carrier out signal for IR repeater applications
- Material categorization: for definitions of compliance please see <u>www.vishav.com/doc?99912</u>

#### **MECHANICAL DATA**

#### Pinning:

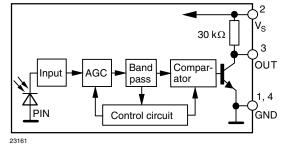

1, 4 = GND, 2 = V<sub>S</sub>, 3 = OUT

#### **ORDERING CODE**

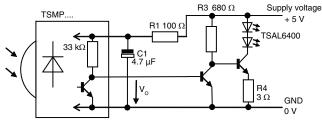

#### Taping:

TSMP95100XVTT - top view taped, 2200 pcs/reel TSMP95100XVTR - side view taped, 2300 pcs/reel

#### **BLOCK DIAGRAM**

#### **APPLICATION CIRCUIT**

Recommended circuit for best sensitivity of the TSMP.... in repeater applications. It limits the output voltage swing  $V_o$  to about 0.7 V in order to avoid internal coupling. 22638-1

#### **ASSEMBLY INSTRUCTIONS**

#### **Reflow Soldering**

- Reflow soldering must be done within 72 h while stored under a max. temperature of 30 °C, 60 % RH after opening the dry pack envelope
- Set the furnace temperatures for pre-heating and heating in accordance with the reflow temperature profile as shown in the diagram. Exercise extreme care to keep the maximum temperature below 260 °C. The temperature shown in the profile means the temperature at the device surface. Since there is a temperature difference between the component and the circuit board, it should be verified that the temperature of the device is accurately being measured
- Handling after reflow should be done only after the work surface has been cooled off

#### Manual Soldering

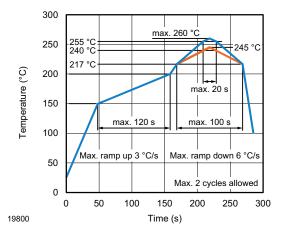

- Use a soldering iron of 25 W or less. Adjust the temperature of the soldering iron below 300 °C
- Finish soldering within 3 s
- · Handle products only after the temperature has cooled off

#### **OUTER PACKAGING**

The sealed reel is packed into a pizza box.

#### LABEL

#### Standard bar code labels for finished goods

The standard bar code labels are product labels and used for identification of goods. The finished goods are packed in final packing area. The standard packing units are labeled with standard bar code labels before transported as finished goods to warehouses. The labels are on each packing unit and contain Vishay Semiconductor GmbH specific data.

## **DRY PACKING**

The reel is packed in an anti-humidity bag to protect the devices from absorbing moisture during transportation and storage.

# FINAL PACKING

The sealed reel is packed into a cardboard box.

## **RECOMMENDED METHOD OF STORAGE**

Dry box storage is recommended as soon as the aluminum bag has been opened to prevent moisture absorption. The following conditions should be observed, if dry boxes are not available:

- Storage temperature 10 °C to 30 °C
- Storage humidity  $\leq$  60 % RH max.

After more than 72 h under these conditions moisture content will be too high for reflow soldering.

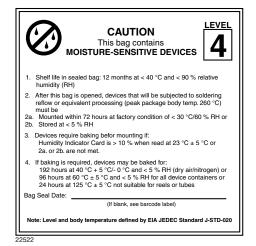

In case of moisture absorption, the devices will recover to the former condition by drying under the following condition:

192 h at 40 °C + 5 °C / - 0 °C and < 5 % RH (dry air / nitrogen) or

96 h at 60  $^\circ\text{C}$  + 5  $^\circ\text{C}$  and < 5 % RH for all device containers or

24 h at 125 °C + 5 °C not suitable for reel or tubes.

An EIA JEDEC<sup>®</sup> standard J-STD-020 level 4 label is included on all dry bags.

EIA JEDEC standard J-STD-020 level 4 label is included on all dry bags
