# Inductor Portfolio Expansion, Part 1: New Vishay Equivalents for Industry-Standard Drum Core Power Inductors

To simplify your inductor sourcing process, Vishay is adding a host of new products that fill out our inductor portfolio with more device options at a wider range of price points. These products will provide you with additional options for designs where achieving a specific price / performance ratio is key.

As the first group of these products, today we're announcing the availability of Vishay equivalents for more than a dozen industry standard drum core families, which are listed in the table below. All will be available from our distributors beginning this month.

These new products are designed to offer comparable solutions to those provided by other industry standard devices, including those from Bourns, Abracon, Delevan, Delta, Taiyoyuden, TDK, and Yageo.

To learn more about product specifics, and to check availability at the Sample Order Center and our distributors, just click on the Vishay part numbers in the table below.
