Optocoupler Package Marking – Changing From Date Code to Lot Code

To improve optocoupler part traceability, Vishay’s Optoelectronics group is changing the package marking from a date code (YWW) to a 4-digit alphanumeric lot code (XXXX).

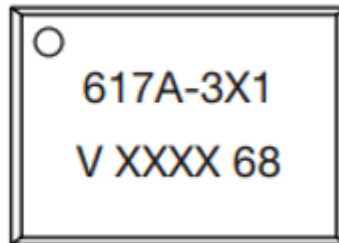

A lot code identifies one manufacturing lot, while a date code typically includes more than one assembly lot. The change in package marking will begin in April 2023.

Example: Package marking for VOLA617A-3X001T
