# Select Vishay Tantalum Molded Capacitors Available With Short Lead Times Through QuickTan Program

Vishay's QuickTan program offers our customers the opportunity to purchase a limited volume of tantalum molded capacitors with a short lead time. Product series available through the program include the [293D](#), [593D](#), and [TR3](#). There is an additional fee for this program, and customers must agree to this fee before the company can open a QuickTan order.

Please note that Vishay's QuickTan service is ordered as a separate line item in addition to the product. This line item will appear on all ordering documentation, such as invoices.

QuickTan is an optional program and is only offered when the requested product and volume can be delivered within the requested time frame. The additional fee is invoiced only when the product is shipped on schedule to the customer from our warehouse.

**For customers in China, the QuickTan surcharges listed below are added to the product's selling price, insofar as a separate charge for the QuickTan service in China is not possible.**

Division	Product Series	Lead Times	Service Fees
Tantalum capacitors	<b>Molded chip:</b> 293D, 593D, and TR3	12 working weeks	Basic price per part plus a 200 % additional fee or minimum charge of \$1000 per line item.

## How to Order via QuickTan

1. Confirm availability of QuickTan service with Business Marketing
2. Enter order:

Line item for desired material at the quoted price

Line item for LOTCHG-MOLDEXPRESS for 2x above price (\$1,000 minimum)

The DNA of tech.™

## Terms and Conditions

As QuickTan is an optional service, the above process chain may be stopped in the beginning if not enough capacity is available for QuickTan deliveries. If this happens, then the QuickTan request will be refused and the order can be confirmed against the actual availability of standard orders.

The customer needs to order the product AND the QuickTan service. Please note that the QuickTan service has a separate part number.

When entering a request for quotation (RFQ), remember to include the SAP P/N and requested lead time.  
**The clock starts when the order is entered in SAP and stops when the product is shipped.**

If there is no specific request for transport, products will be shipped under the agreed terms and conditions using standard and not express shipment.

If the customer requests express shipment, the **Incoterm is ex works** from the final Vishay warehouse. Transport to the customer's dock or express shipment costs (internally or externally) are not included in the service fee. However, the customer has to specify the method of shipment, e.g., DHL express, overnight, or taxi.

The service charge will not be charged if we fail to deliver (ex works) within the agreed time.
